AI-373L ball valve with locking lever and compression ends

Application

The Altecnic Intaball ball valves with locking lever and compression ends are the ideal isolation valve, for use in copper pipe systems. The valves are ideal for use on potable water and domestic hot and cold water services and for providing isolation on many other applications including chilled water, air and non corrosive liquids. Suitable for isolating individual outlets, or providing isolation for 'Y' strainers or control valves, should maintenance be required. The locking device prevents unauthorised valve operation.

Design

The Altecnic AI-373L full bore brass ball valves with locking lever are operated through 90°, with bi-directional flow. Hard chrome plated ball for increased wear resistance. Compact design, with PTFE body seats for reliable isolation. Anti blow-out stem. The valves are designed for high flow rates with minimum pressure drops. Supplied with compression ends complying with BS EN 1252-2 for use with R250 (half hard) copper tube. Valve are available with either a red or blue lever sleeve for visual indication of hot or cold service.
